## SUMMARY OF FINDINGS

The total number of employed wage and salary earners in Australia in June 1988 was estimated as 5,938,700. This represents an increase of 15,500 (0.3 per cent) since March 1988 and an increase of 191,200 (3.3 per cent) compared to June 1987.

Over the last four years of the survey, the number of wage and salary earners has increased by 808,300 (15.8 per cent).

### Private and public sectors

Growth in the number of employed wage and salary earners (employees) in recent years is shown in Diagram 1 below. It can be seen that growth has been concentrated in the private sector. In the twelve months to June 1988, the number of private sector employees grew by 209,200 (5.2 per cent) to 4,198,900. This is consistent with an increase of 752,700 employees (21.8 per cent) since June 1984.

In contrast, over the same period very little growth has occurred in the public sector. In the twelve months to June 1988, the number of public sector employees decreased by 18,100 (1.0 per cent) to 1,739,800, although the public sector has grown by 55,600 (3.3 per cent) since June 1984.

The proportion of wage and salary earners employed in the private sector has continued to increase, from 67.2 per cent in June 1984, to 69.4 per cent in June 1987 and 70.7 per cent in June 1988.

Diagram 1 also shows:

- a sharp drop in the number of public sector employees in December and January each year, principally due to temporary staff in the education industry ceasing employment after the end of the school year;
- an increase in the number of public sector employees in June and July 1986, due to the employment of 40,700 temporary employees for the Census of Population and Housing; and
- an increase in the number of public sector employees in July 1987, due to the employment of 67,600 temporary

employees to conduct the Federal Election. This effect was partly offset by a fall in the number of employees in July in the education industry due to the incidence of school holidays in most States.

### Industries

Diagram 2 shows changes in the number of employed wage and salary earners, both for the twelve months to June 1988, and over the last four years to June 1988, classified by ASIC division.

The Finance, property and business services industry continues to show large employee growth, with an increase of 192,100 (35.3 per cent) since June 1984, and 42,100 (6.1 per cent) since June 1987, to 736,300 employees in June 1988.

The Recreation, personal and other services industry has also shown strong employee growth with an increase of 92,400 (27.2 per cent) since June 1984, and an increase of 20,200 (4.9 per cent) since June 1987, to 432,000 employees in June 1988.

Growth in the number of employees in the Construction industry has increased significantly recently. Of the increase of 61,300 employees (27.1 per cent) over the last four years, almost one half of the growth (28,300) has occurred in the last twelve months.

The Wholesale and retail trade industry has had above average growth in the four years since June 1984, with an increase in the number of employees of 235,000 (23.7 per cent) to 1,226,100 employees. In the last year, the increase was 95,700 employees (8.5 per cent).

The Electricity, gas and water industry continues as the main industry to show a fall in the number of employees in the last four years (9.1 per cent). Of this decrease, 4,900 (3.7 per cent) has occurred over the last year, with a drop to 128,200 employees.

The Communication, Transport and storage and Manufacturing industries are the only others to show a fall in the number of employees in the last year, with decreases of

DIAGRAM 1. EMPLOYED WAGE AND SALARY EARNERS, SECTORS  
AUSTRALIA

DIAGRAM 2. EMPLOYED WAGE AND SALARY EARNERS: EMPLOYEE GROWTH, AUSTRALIA

6,000 (4.4 per cent), 1,500 (0.5 per cent) and 9,200 (0.9 per cent) respectively.

#### Employer unit size

Estimates are given (Table 14) of private sector employees in employer units of various sizes. Diagram 3 shows the concentration of private sector employees in employer units in three size ranges, by industry.

Over all industries, employer units with less than 20 employees account for approximately 33 per cent of the number of private sector employees, employer units with 20-99 employees account for approximately 23 per cent, while those with 100 or more employees account for approximately 44 per cent. This proportion varies greatly across industries - employer units with 100 or more employees dominate the Mining industry, while the Con-

struction industry is dominated by employer units with less than 20 employees.

#### Male and female wage and salary earners

Estimates of male and female, as well as full-time and part-time, wage and salary earners relate to the middle month of each quarter. For the year to May 1988, the number of female employees has increased at almost twice the rate for male employees.

For female employment, growth has occurred in both the private and public sectors. In the last four years, the number of private sector female employees has increased by 400,200 (27.9 per cent) to 1,836,300 in May 1988. In this period, the number of public sector female employees has grown by 105,900 (16.7 per cent) to 738,900. In contrast, employee growth for males was concentrated in the

DIAGRAM 3. EMPLOYED WAGE AND SALARY EARNERS: PRIVATE SECTOR, INDUSTRIES, PROPORTION OF EMPLOYEES BY EMPLOYER UNIT SIZE, MAY 1988

private sector, with an increase over the four year period of 361,700 (18.0 per cent) to 2,373,600 employees in May 1988. The number of public sector male employees decreased in this period by 22,000 (2.1 per cent) to 1,005,700.

Diagram 4 shows the increasing proportion of female wage and salary earners to total wage and salary earners. This proportion has grown steadily from 40.5 per cent in May 1984 to 43.2 per cent in May 1988. The continued increase in the proportion of female employees is directly related to their high participation in part-time employment and in industries which display the strongest growth trends.

Diagram 4 also shows a seasonal fall, between November and February each year, in the proportion of wage and salary earners who are female. The principal contribution to this effect is a decrease in the number of part-time female employees in the Community services industry.

#### Full-time and part-time wage and salary earners

In May 1988, there were an estimated 4,523,300 full-time and 1,431,200 part-time employees in Australia. These represent an increase of 12,800 (0.3 per cent) full-time and 57,300 (4.2 per cent) part-time employees since February 1988.

Diagram 5 shows the growth in the number of full-time and part-time employees over the last four years. The rate of growth for part-time employees has been much greater than that of full-time employees, viz: 44.2 per cent, compared with 9.9 per cent. In the twelve months to May 1988, part-time employees have increased by 104,600 (7.9 per cent), compared with an increase in the number of full-time employees of 96,000 (2.2 per cent).

Since May 1984, percentage growth in the number of part-time employees has been of similar order in both the private and public sectors, 44.2 per cent and 44.3 per cent respectively. However, growth in the number of full-time employees has been concentrated in the private sector, (15.3 per cent) compared to the public sector (0.2 per cent).

The number of part-time female employees has increased by 311,600 (43.2 per cent) since May 1984, while the number of part-time male employees has increased by

**DIAGRAM 5. EMPLOYED WAGE AND SALARY EARNERS, PERSONS, AUSTRALIA**

Semi-logarithmic graphs (see Appendix 1 paragraph 18)

127,400 (47.1 per cent). In the same four year period, the increase in the number of full-time female employees (194,400 - 14.4 per cent) is relatively more significant than that for full-time males (212,400 - 7.7 per cent).

#### Earnings

Total earnings for employed wage and salary earners in the June quarter 1988 are estimated as \$32,185.4m. This is an increase of \$2,846.9m (9.7 per cent) over the same period in the previous year and an increase of \$9,966.2m (44.9 per cent) over June quarter 1984.

## APPENDIX 1 - EXPLANATORY NOTES

### **Introduction**

This publication contains results of the quarterly Survey of Employment and Earnings (SEE) which was introduced in the September quarter 1983. The survey is designed to obtain, from employer units, information on numbers of wage and salary earners employed each month and their quarterly earnings. It replaces the civilian employees series, based principally on information obtained from payroll tax returns, which was discontinued after April 1980.

2. Background information on the reasons for the introduction of this survey is provided in *Information Paper: Review of ABS Employment Statistics* (6239.0) published on 8 July 1981. Further information on the differences in concepts, methodology and coverage of the old and new employment series is provided in *Information Paper: New Statistical Series: Employment, Average Weekly Earnings, Job Vacancies and Overtime* (6256.0) issued on 21 June 1984.

### **Scope of the survey**

3. All wage and salary earners who received pay in any pay period ending within the quarter were represented in the survey, except: members of the Australian permanent defence forces; employees of enterprises in the private sector primarily engaged in agriculture, forestry, fishing and hunting; employees in private households employing staff; employees of overseas embassies, consulates, etc; employees based outside Australia.

4. As an indicator of the number of employed wage and salary earners out of scope of the survey, and included in the first three groups above, the following estimates derived from other sources show the average number of employees for the year ended June 1988 as: New South Wales 73,600; Victoria 42,700; Queensland 49,800; South Australia 18,100; Western Australia 28,500; Tasmania 12,400; Northern Territory 2,700; Australian Capital Territory 7,500; and Australia 235,300.

### **Survey design**

5. The survey is conducted by mail each quarter with data collected on monthly number of employees and quarterly earnings. For the first and last month of each quarter, only the total number of persons is collected; for the mid month of each quarter, details of males and females, full-time and part-time are collected.

6. For the *Private sector*, a sample of approximately 15,000 private employer units was selected from the ABS register of businesses to ensure adequate State and industry representation. The statistical unit for the survey comprises all activities of an enterprise in a particular State. Each statistical unit was classified to an industry which reflected the predominant activity of the enterprise in the State. In a small number of cases where an enterprise had a significant number of employees in more than one industry, a separate statistical unit was created for each industry. Periodically, a review is undertaken to determine whether existing enterprises which are split into

separate statistical units should continue to report on that basis. In addition, larger enterprises which are not currently split into separate statistical units are examined to decide whether they should be split for the purpose of reporting their employees. Any changes in reporting arrangements as a result of such review can have an impact on the industry estimates at the time of their implementation. The statistical units are stratified by State, industry, and number of employees. An equal probability sample is selected from each stratum.

7. For the *Public sector*, statistical units are derived in the same way as for the private sector; data are collected in the survey from all public sector units.

8. For the March quarter 1988 survey, a new private sector sample was introduced which reduced the number of private sector statistical units selected from 20,000 to 15,000. The new allocation of units within the existing stratification was achieved without significant loss of accuracy in the main estimates. The greater than usual change in the sample in recent quarters, however, has caused an increase in the standard error of the movement in the estimates between those periods (see paragraphs 10 and 11, below, for more information on interpretation of estimates of movements).

### **Reliability of estimates**

9. Estimates are subject to sampling and non-sampling errors. For more information refer to Appendix 3 - Technical Note.

### **Interpretation of estimates of movements**

10. While estimates of employed wage and salary earners are presented in this publication for each month of the quarter, the survey is conducted quarterly and the sample of employer units is updated each quarter to reflect changes in the ABS register of business units, from which the sample is selected. These changes arise from the emergence of new businesses, takeovers and mergers, changes to industry classification, changes in the number of employees, and businesses which have ceased operations. Periodically, the ABS takes special steps to improve the coverage of the register in specific industry sectors. Recently, a number of checks have been undertaken of businesses in various industries listed on the register. Such updating of the register can contribute to sudden changes in the estimates of employed wage and salary earners, and earnings for those industries.

11. Estimates of monthly movements within each quarter arise solely from changes in reported number of employees by employer units but movements between quarters also reflect changes resulting from updating the survey sample.

### **Comparability of results**

12. This series differs in several important ways from the former payroll tax-based civilian employees series, and estimates of employed wage and salary earners obtained from the Labour Force Survey (LFS). It provides

an estimate of the number of jobs occupied by people, whereas the other two series provide estimates of the number of people in jobs. For this series, data are obtained directly from a sample survey of employer units drawn from the ABS register of business units, which is more complete than the coverage provided by employers subject to payroll tax. Comparability with LFS estimates is affected by the use of a different survey methodology and definitions. In addition, because of unavoidable time delays, which can vary across States, lags occur between the birth of new businesses and their appearance on the ABS register. They will not be represented in the sample selected from the register for one or two quarters after such businesses have commenced operation. As a consequence, estimates of movements in this series will lag those produced from the LFS, particularly at a time of upward movement in the business cycle. A detailed description of the comparability between the SEE series, the former payroll tax-based Civilian Employees series and the series provided by the LFS is presented in the *Information Paper: New Statistical Series: Employment, Average Weekly Earnings, Job Vacancies and Overtime* (6256.0). Additional detail on the differences between the SEE and the LFS series appears in the *Information Paper: Comparison of Employment Estimates from the Labour Force Survey and the Survey of Employment and Earnings* (6263.0), and in the supplement to the December 1986 issue of the *Treasury Roundup*.

13. Separate estimates of full-time and part-time employees are included in Table 4. For definitions of these terms, see Appendix 2 - Glossary. This table was first published in the June quarter 1987 issue of this publication and has not been published for previous quarters back to September 1983. This information is available on request. For the reasons outlined above in paragraph 12, it is difficult to compare estimates of full-time and part-time employees derived from the SEE with those produced from the LFS. Generally, the number of full-time employees is higher in the LFS series, and the number of part-time employees is higher in the SEE series. In the LFS, a person who works more than 35 hours a week in total in two (or more) part-time jobs is classified as working full-time. However, in this situation, the SEE would show two part-time jobs as having been filled.

14. The SEE collects total quarterly employee earnings primarily for use in estimating the gross domestic product component of the Australian National Accounts. Whilst average employee earnings can be derived from these data, the results will not be comparable with those from the Survey of Average Weekly Earnings (AWE) published in *Average Weekly Earnings, States and Australia* (6302.0). The SEE collects the sum of employee earnings paid in all pay periods ending in a quarter and the results will be affected by the varying number of pay periods from quarter to quarter, whereas the AWE relates to a specified pay period within a quarter and is not subject to such influences. In addition, certain types of payments within the scope of the SEE, such as retrospective pay, pay in advance, leave loadings and severance, termination and redundancy payments are specifically excluded from the AWE. The SEE earnings data are also subject to seasonal variations particularly in December and March

quarters due to the incidence of holidays taken in January being paid in advance and the earnings being reported in December quarter figures.

15. Prior to July 1983 the number of public sector employees was derived from a variety of administrative sources and published in *The Labour Force, Australia* (6203.0). Public sector employee figures for July 1983 and subsequent months are based on data obtained from government departments and authorities using the same questionnaire, definitions, reference period, collection and processing procedures as for the sample of private employer units.

16. Differences occur between the new and old public sector series because of the changes to collection arrangements, reference period, the treatment of part-time employees and inclusion of public employees in forestry and services to agriculture (11,200 in May 1983). To provide a statistical link between the new and old public sector series, information on the new and old basis for April, May and June 1983 was released in the September quarter 1983 issue of this publication.

#### **Employer unit size classification**

17. Data presented in Table 14 show the concentration of employees in employer units in three size ranges. Over a period, the composition of these categories will vary as some employer units migrate from one size group to another due to changes in their employment levels. This will affect changes over time in the distribution of employees by size of employer unit.

#### **Semi-logarithmic graphs**

18. Diagram 5 on page 3 has been drawn using a logarithmic vertical scale to facilitate comparisons of rates of growth in series of differing magnitude. Equal distances on the vertical scale (over equal time periods) indicate equal rates of growth.

#### **Related publications**

19. Users may also wish to refer to the following publications which are available on request:

*The Labour Force, Australia* (6203.0) — issued monthly  
*Information Paper: Comparison of Employment Estimates from the Labour Force Survey and the Survey of Employment and Earnings* (6263.0) — issued 11 July 1985

*Average Weekly Earnings, Australia (Preliminary)* (6301.0) and *Average Weekly Earnings, States and Australia* (6302.0) — issued quarterly

*Pay Periodicity of Gross Wages and Salaries, Australia, September quarter 1984* (6347.0) — issued 5 September 1985

*Occasional Paper No. 1986/1: Statistics on Wages, Earnings, Income and Labour Costs — A Guide to Their Concepts, Measurement and Usage* — issued June 1986

*A Guide to Labour Statistics* (6102.0) — issued 10 February 1986

*Small Business in Australia 1983-84 to 1986-87* (1321.0) — issued September 1988.

20. Current publications produced by the ABS are listed in the *Catalogue of Publications, Australia* (1101.0). The ABS also issues, on Tuesdays and Fridays, a *Publications Advice* (1105.0) which lists publications to be released within the next few days. The Catalogue and Publications Advice are available from any ABS office.

#### Unpublished statistics

21. In some cases, the ABS can also make available other information which is not published. This information may be made available in one or more of the following forms: microfiche, photocopy, data tape, computer printout, diskette, clerically-extracted tabulation. Generally, a charge is made for providing unpublished information. Inquiries should be made to the officer whose name appears in the *Phone Inquiries* section of the Inquiries box at the front of this publication, or to Information Services in the nearest ABS office.

#### Symbols and other usages

- nil or rounded to zero
- r revised
- \* subject to sampling variability too high for most practical purposes. See paragraph 3 of Appendix 3 - Technical Note.

22. Where figures have been rounded, discrepancies may occur between sums of the component items and totals.

#### Electronic services

VIATEL. Key \*656# for selected current economic, social, and demographic statistics.

AUSSTATS. Thousands of up-to-date time series are available on this ABS on-line service through CSIRONET.

For further information phone the AUSSTATS Help Desk on (062) 52 6017.

TELESTATS. This service provides foreign trade statistics tailored to users' requirements. Further information is available on (062) 52 5404.

#### Floppy disk service

Selected ABS statistics are available on floppy disk. For further information phone (062) 52 6684.

## APPENDIX 2 - GLOSSARY

*Commonwealth government employees.* Persons employed by all departments, agencies and authorities created by or reporting to the Commonwealth Parliament, including trading bodies such as banks, airlines and communications bodies. Those bodies run jointly by Commonwealth and State governments are classified to Commonwealth.

*Employer units* are the statistical units which make up the population from which the sample was drawn (see paragraph 6 of Appendix 1 - Explanatory Notes).

*Employer unit size.* To derive estimates of employer unit size, each of the approximately 15,000 private sector employer units is allocated a size classification based on the number of employees actually reported for the middle month of the quarter. The size classification reflects the size of an enterprise in a particular State/Territory and not necessarily the size of an enterprise Australia wide.

*Full-time employees.* Permanent, temporary and casual employees who normally work the agreed or award hours for a full-time employee in their occupation and who received pay for any part of the reference period. If agreed or award hours do not apply, employees are regarded as full-time if they ordinarily work 35 hours or more per week.

*Gross earnings.* Payments to employees before tax and other items (such as superannuation) are deducted. They comprise ordinary time and overtime earnings; overaward payments; penalty payments, shift and other remunerative allowances; commissions and retainers; bonuses and similar payments; payments under incentive or piecework; payments under profit-sharing schemes; leave loadings; annual and long service leave payments; sick leave payments; advance and retrospective payments; salaries and fees paid to company directors, members of boards, committees, commissions, councils, etc.; amounts paid to employees on workers' compensation which are not covered by insurance, i.e. 'make-up' pay; and severance, termination and redundancy payments.

*Industry.* Industry is classified according to the *Australian Standard Industrial Classification (ASIC) 1983 Edition, (1201.0)*.

*Local government employees.* Persons employed by municipalities and shires and other local authorities

created by or subject to the provisions of local government legislation, such as county councils in New South Wales.

*Number of employees.* All wage and salary earners who received pay for any part of the relevant pay period. All permanent, temporary, casual, managerial and executive employees are included. Part-time and casual employees who may have worked only a few hours during the reference period are included. Employees on paid leave and those employees on workers' compensation who continue to be paid through the employer's payroll are also included. Casual employees who work on an irregular basis and who were not paid during the relevant pay period, employees on leave without pay, on strike or stood down without pay for the whole of the pay period are excluded.

*Part-time employees.* Permanent, temporary and casual employees who are not classified as full-time employees as defined.

*Public employees.* Administrative employees and all other employees of Commonwealth, State and Local government businesses and financial undertakings engaged in services such as railways, road transport, banks, postal and telecommunications, air transport, education, radio, television, police, public works, factories, marketing authorities, hospitals and welfare institutions.

*Reference period for the number of employees.* The last pay period ending on or before the third Friday in each month.

*Reference period for earnings.* All pay periods for which the end of the pay period falls within the quarter.

*Sector.* Public sector includes all government departments, agencies and authorities created by, or reporting to the Commonwealth and State Parliaments. All remaining employees are classified as private sector.

*State government employees.* Persons employed by all State government departments and authorities created by, or reporting to, State Parliaments, including organisations for which the Commonwealth has assumed financial responsibility, e.g. universities. Following self-government, the Northern Territory administration has been classified as a 'State' government.

## APPENDIX 3 - TECHNICAL NOTE

### Reliability of estimates

Estimates for the private sector in this publication are subject to sampling variability because they are based on information relating to a sample of employer units rather than a full enumeration, (i.e. they may differ from the figures that would have been produced if the information had been obtained from all private employer units). This difference, called sampling error, should not be confused with inaccuracy that may occur because of imperfections in reporting by respondents or in processing by the ABS; such inaccuracy is referred to as non-sampling error and may occur in any enumeration, whether it be a full count or sample. Efforts have been made to reduce the non-sampling error by careful design of questionnaires, detailed checking of returns and quality control of processing. Data for the public sector are obtained from a full enumeration of all agencies and thus are not subject to sampling errors.

2. The sampling error associated with any estimate can be estimated from the sample results. One measure of sampling error is given by the *standard error* which indicates the degree to which an estimate may vary from the value that would have been obtained from a full enumeration (the 'true' figure). There are about two chances in three that a sample estimate differs from the true value by less than one standard error, and about nineteen chances in twenty that the difference will be less than two standard errors.

3. If the standard error of an estimate is large relative to the size of the estimate, the usefulness of that estimate is seriously impaired. For the tables in this publication, estimates with standard errors greater than 25 per cent of the estimate, have been labelled with an asterisk.

4. Standard errors of estimates of *level*, by industry, are shown in Table A below only for the third month of the quarter. As the survey is conducted quarterly from a common sample of employer units, who report details of employees for each month of the quarter, standard errors on all estimates for total persons employed in each month are of a similar magnitude.

5. Standard errors of estimates of *movements*, provide a measure of the reliability of changes in the level of an estimate. Table A shows standard errors for movements in the level of estimates for persons between the third month of successive quarters. Annual movement standard errors are also shown in Table A and relate to December 1986 - December 1987 movements. In the past, these would have been applicable to 1988 annual movements, as the magnitude of these standard errors does not change significantly over the course of a single year. However, because of the change in sample size in the March quarter 1988, standard errors for 1988 annual movements are somewhat higher than those shown in Table A. Revised annual movement standard errors will be published in the next issue of this publication.

6. An example of the use of standard error on *levels* is as follows. If the estimated number of wage and salary earners was 5,500,000 with a standard error of 25,000, then there would be about two chances in three that a full enumeration would have given a figure in the range 5,475,000 to 5,525,000 and about nineteen chances in twenty that it would be in the range 5,450,000 to 5,550,000.

7. Standard errors for earnings are approximately the same relative size as standard errors for number of employees. Detailed standard errors for both employment and earnings are available on request.

TABLE A. EMPLOYED WAGE AND SALARY EARNERS, AUSTRALIA - PRIVATE SECTOR :  
STANDARD ERRORS, JUNE 1988, PERSONS ('000)
